

ADVANCED
ENVIROSEPTIC^{MD}

Is being re-branded as

System O 
NEXT GENERATION **ENVIRO**SEPTIC

Make-Way Environmental Technologies Inc wishes to announce that its Advanced Enviro-Septic system will be known as System O. Please be assured that although the name is changing, the technology is not! System O is still the same with all its amazing features. Easy to install, no mantle, no moving parts, no electricity if gravity flow is maintained. It remains the simplest, most cost efficient septic system producing Level IV quality effluent. And to ensure the simplicity of the system, we are continuously working to improve the components of the system, such as our new sampling device and double offset adaptors.

System O is Enviro-Septic technology!

**NO ELECTRICITY
NO MOVING PARTS
NO MAINTENANCE**

Notes from the field!

"We would like to welcome Paquette Excavation and Renovation from Bourget in Eastern Ontario. Nicolas and Serge have completed their first installation of System O using Enviro-Septic technology. They were very happy with the product noting the ease of installing everything, including the new sample device and the one step connect-the-pipes and backfill installation."

"Ottawa company Latimer Excavating has completed their first install of System O. The site was a new house build where the sand for the bed was placed directly on top of existing ground. Ivan commented he found the sampling device and the Enviro-Septic pipes easy to place and connect at the end of runs. For this install, the vent pipe was easily "hidden" by placing it about 15 feet from the bed against the existing forest. Terrilyn in the Latimer Excavating's office is a designer and she has asked for a lunch and learn on Enviro-Septic technology. We hope to see Latimer Excavating installing more System O soon."
