RAINWATER HARVESTING

A rainwater harvesting system is exactly that. A system that collects rain water, filters it and stores it for a “not so rainy day”. With the price of water going higher and higher, and the surrounding water tables getting lower and lower, it just makes sense!

Now you can water your lawn and gardens without putting a strain on the water tables. When people ask why your lawn and gardens look so good, you can tell them about Make-Way Environmental Technologies and how they have the solution for you.

Since 2019 Make-Way Environmental Technologies has been providing residential and commercial customers in Ontario with rainwater harvesting solutions. Our German made Graf Water rainwater harvesting packages benefit from the over 50 years of Graf Water experience providing water management solutions world-wide.

Features of a Graf rainwater installation include:

- The tank. We have tanks in range of sizes in order to match needs on each project. Multiple connected tanks can even be used to serve the largest projects
- The filter. There are a range of filter options including self-cleaning filters which reduce owner maintenance obligations
- The pump. Our pumps have a floating suction and a stilling well in order to recycle the cleanest water from the top of the water surface
- The cover. The adjustable telescopic shaft and cover ensures the tank cover is level with your lawn. Cast iron covers are available to allow the tanks to be installed under pavement or paving stone surfaces

Using harvested rainwater has benefits for your pocketbook as well as the environment. For owners connected to municipal water systems, using rainwater instead of the municipal supply saves money! For owners with private wells, using the rainwater preserves your groundwater table and supply of well water. Your plants will thank you for using rainwater instead of chlorinated municipal water or hard well water. Collecting and moving the rainwater away from the foundation helps reduce basement humidity and preserve your foundation.

OUR MANAGEMENT SOLUTIONS: Make-Way not only provides rainwater harvesting solutions but also other water management solutions from Graf Water. We can help you develop an integrated solution to your RAINWATER, STORMWATER and GREYWATER management goals including meeting the requirements of development approvals.
