

It's easy, it's simple, it works!

Although the Advanced Enviro-Septic pipes are at the core of the System O installations, system sand plays an important role in its success. System sand controls the speed at which the water flows out of the Advanced Enviro-Septic pipes.

The slower flow rate caused by the sand makes it very effective at extracting minute particles from the water by filtration. It also allows sufficient retention time for the microorganisms in the pipes to assimilate pollutants. If the sand is too fine, it could clog up the bed. If the sand is too coarse, the treated effluent will pass too quickly.

The **Ontario System Sand Evaluation Tool** can be found on our website. Know within seconds if your sand qualifies.

- Effective diameter (D_{10}) between 0.2 and 0.5 mm;
- Coefficient of Uniformity (C_u) ≤ 4.5 ;
- Less than 3% of material smaller than 80 μm ; and
- Less than 20% of material larger than 2.5 mm.

Just a reminder! We have 2 options for all your septic applications!

Standard - **BMEC #23-05-407**

Nested Pipe - **BMEC 23-06-408**

Make-Way had a busy spring with conventions and contractor meetings! If you did not have an opportunity to connect with us, be sure to reach out to one of our reps today!

A graphic featuring the System O logo (the word "System" followed by a stylized "O" with three curved lines) and a Canadian flag icon. Below the logo, the text reads "Canadian made Solution for Canada". Further down, four phone numbers are listed: BNQ 3680-910, CAN/BNQ 3680-600, BMEC 23-05-407, and BMEC 23-06-408. The background is a light pink color with a large, faint maple leaf watermark.

Questions? Call today! We are here for you!
