Mattawa Cabin Embraces Green Living with Innovative Septic System: A Win for Environment and Local Business

Mattawa, ON – In a world increasingly focused on sustainable living and environmental protection, a cozy cabin nestled on the banks of the picturesque Ottawa River in Mattawa has become a beacon of responsible property management. A brand-new System O)) advanced septic system was recently installed here, marking a significant step forward for both eco-conscious homeowners and local businesses. The decision to opt for a System O)) was driven by its impressive array of benefits, particularly its minimal environmental impact. Unlike traditional septic systems that demand a large excavation footprint, the System O)) is remarkably compact, requiring

roughly half the space of a conventional bed. This "smaller footprint" proved invaluable for the Mattawa cabin, allowing for the preservation of a significant portion of the property's existing trees. The result is a seamless integration of modern infrastructure with the natural beauty of the lot, which boasts stunning views of the Quebec Forest across the river.

Beyond its size, the System O)) offers a host of other advantages that make it an ideal choice for sensitive natural areas. It requires less sand for installation, leading to potential delivery cost savings – a significant consideration, especially for properties in more remote or island locations. Furthermore, the system is designed to operate without the need for stone or a mantle, simplifying the installation process and further reducing material usage.

Perhaps one of its most appealing features is its "passive treatment" design, meaning it operates without the need for electricity. This not only translates to energy savings for the homeowner but also reduces reliance on power grids, making it a robust and reliable solution. Homeowners can also rest easy knowing there's "no media to replace," significantly cutting down on long-term maintenance and associated costs.

However, the environmental benefits truly set System O)) apart. In combination with the system sand, its advanced technology includes "phosphate retention and pollutant removal," a critical feature for protecting our waterways. With these safeguards in place, the Ottawa River and its delicate ecosystem can be maintained ensuring its health for generations to come. The "no clear cutting" advantage is another win for the environment, allowing property owners to maintain their natural surroundings and save valuable trees.

This particular installation was a milestone for **Novack Septic**, a local company based right here in the Mattawa area. It was their first time working with the System O)) technology, and by all accounts, they performed an outstanding job. Their successful completion of this project means Novak Septic is now officially certified to install System O)) systems. This adds a powerful new tool to their "toolbelt," enabling them to offer innovative and environmentally friendly solutions to clients, particularly those with challenging lots or a strong desire to preserve their property's natural beauty and mature trees.

The cabin's idyllic setting offers a unique blend of tranquility and accessibility. While

enjoying the serene views of the Quebec Forest, a quick and pleasant boat ride across the Ottawa River brings residents directly to the charming town of Mattawa. As the community buzzes with excitement from the recent Voyager Days celebrations, this new System O)) installation stands as a quiet testament to forward-thinking environmental stewardship, proving that modern convenience can indeed coexist harmoniously with nature.

You can find all your System O)) needs at our many dealers scattered across Ontario. Be sure to plan ahead and contact a dealer near you!
